*Redefining* Overhead Conveyors

## Finishing Systems

### IntelliTrak's Role in Finishing Systems

OCS IntelliTrak, Inc. has redefined overhead conveyor systems by utilizing a rotating tube to drive loads up to 1,000 lbs. These **modular, highly flexible** systems incorporate both driven and non-driven lines to **maximize efficiency and effectiveness**. Compared to traditional *overhead power & free*, IntelliTrak is:

- Lower Cost
- Lower Maintenance
- Cleaner
- Quieter
- Modular
- Inherently Safer
- Highly Configurable

Load capacities are as follows:

	100 Series	500 Series
Single Trolley Carrier	100 lbs.	500 lbs.
Dual Trolley Carrier	200 lbs.	1,000 lbs.

The addressable trolleys and the ability to automatically travel to a particular finishing booth have made IntelliTrak the best choice for those applications where significant labor cost reductions and production efficiencies are important.

The manager of this plastic part finishing plant reports,

*"Our system runs perfectly, and does everything we expected it to do."*

The Line Operation Supervisor of a wood finishing operation where the IntelliTrak system was installed says,

*"There is no other conveyor that can do everything that IntelliTrak does."*

*Your Overhead Power & Free Solution*

## IntelliTrak's Design is Intelligent

The design of an IntelliTrak system makes it possible to accomplish multiple functions with one single conveyor in your finishing system. You will have the capability to:

- Change processes or destinations of products on the fly
- Set up in-line speed changes
- Run trolleys both forward and reverse simultaneously
- Stop a carrier for processing without stopping the entire line
- Easily incorporate vertical lifts
- Negotiate inclines and declines
- Accumulate loads in-line
- Have both driven and non-driven line in the same system
- Dip into tanks
- Reduce maintenance

## IntelliTrak Handles Heat

Moving product through the various stages and processes of a finishing system is possible without transferring product from one line to another. The IntelliTrak Overhead Conveyor System can go through ovens up to 450° Fahrenheit with our unique IntelliTrak Temperature Regulator System. This system keeps the temperature of the IntelliTrak conveyor at or below 200° Fahrenheit, even if the process temperature in the oven is as high as 450° Fahrenheit.

## IntelliTrak's Return on Investment

You will realize increased production because IntelliTrak allows your personnel to be more efficient. The typical payback on your investment in IntelliTrak is exceptional with a 6 to 18 month return.

***Not only does IntelliTrak deliver product and service – it delivers profits.***
